$$((x + 1)^n - x^n) = (x + (x + 1))$$

$$((x + 1)^n - x^n) = ((2 \times x) + 1)$$

$$\sum_{(x+1)}^{(n \rightarrow \infty)} (x^n - (x-1)^n) = \sum_{(x+1)} (2 \times x)$$

$$\sum_{(x+a)}^{(n \rightarrow \infty)} (x^n - (x-a)^n) = \sum_{(x+a)} \{(x \times \{a + (a \times x^{(-1)})\}) + x\}$$
